## Digital Signage

port information system

### What is DSS?

Digital Signage Systems (DSS) are a new approach in delivering information. It's the easiest way to make the most out of every bit of your information you want to share. It simply acts as the successor of the good old guidance sign at the wall. Or, frankly said, DSS is actually what we call a „sign on steroids“. Imagine a system that delivers both visual and audible information in a way you've never seen before...

### Project example:

Client: **Rostock-Warnemünde Cruise Center** (150 port calls by 36 different cruise ships with around 160,000 international cruise passengers)

### Problem:

The client was looking for an „easy-to-use-and-quick-to-change“ system to provide essential information (e.g. changes in schedule) and touristical information (points of interest) for cruise passengers as well as for entertaining them during their stay in the terminal.

### Solution:

DSS from JAKOTA with a selection of currently available modules: port arrivals, ship traffic, live weather feeds and forecast, news, webcam, touristical information, schedule changes (quickly changeable), advertising, animated city maps, slideshows.

### your advantages:

- » unattended check-in and check-out information for cruise passengers
- » simple program switches (berthing / cast off / check in)
- » display of port arrivals and ship traffic information
- » with timers or remote control
- » easy control of system, also over the web
- » live weather data, instant news, live images of webcams
- » integration of webpages
- » no limits in usable media formats
- » touristic video image trailers
- » advertising modules
- » animated city-maps and guidance solutions
- » slideshows
