Riverview

passenger info system Riverview

Passengers of cruise liners above all expect repose and ease from their journey. At the same time, they are far from resting purely passive: they want to know about the events taking place aboard, some want to preview their trips and visits before landing, others want to be informed about the technical data of their movable holiday residence.

We want to meet these needs and contribute to the enjoyment of live aboard with the communication- and information system Riverview, developed by JAKOTA Cruise Systems. It allows operating companies to have their clients informed about all relevant news (current speed and direction, data of position, indication of activities, trips, events). Riverview informs passengers of cruise liners all day long and across various end device under simple control of the ship management. The system runs unattended but also allows the integration of new textual and pictorial information and can be easily updated aboard.

Additionally, Riverview can undertake all communication tasks (e-mail and data transfer) simultaneously. Up- and downstream the Danube, Rhine, Main, Rhône and the Saône, Riverview already provides ships successfully with UMTS, GSM and WLAN techniques. Installations on board of dozens of rivercruisers prove our reliability and experience with passenger cruise infosystems.

your advantages:

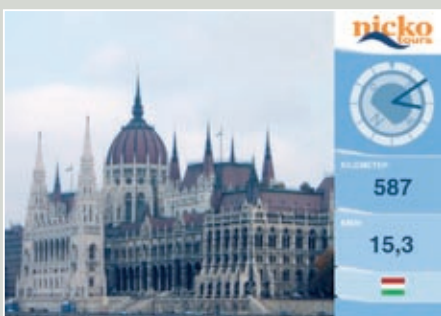

- outstanding: precise information about the current "river-kilometre"
- various topographic Maps showing the ship's itinerary & position
- report from the Bridge
- integrates shipdetails, news, safety, weather and Point of Interest Information
- onboard promotion
- easily keep your guest well informed
- adjustment of content and layout flexibly to specific client needs
- individual layout, style and succession of information
- any display possible to various end devices (CRT, TFT, plasma monitors, PDA, telephone - existing displays will be used, no need for expensive adjustment)
- any desired distribution of information aboard possible due to innovative client-server-technology (no limit on Client numbers)
- collect and send various voyage information of the ship to your home servers
- all communication- and information services out of one single autonomous appliance
